

MODULE 5

Experiences on Learning Skills Development

The aim of the LELLE Kit was to provide a toolbox that includes tested tools and training materials supporting the integration of learning skills development into any existing university curricula.

This module of the KIT provide a collection of the on-hand experiences gained by the partners in various stages and activities of the pilot phase:

Pilot results of the profiling tool and the training materials

The Hungarian and Polish university partners piloted the profiling tool and the training materials with their students over two semesters. The lessons learned in the piloting of the profiling tool and the mentor/teacher training material are shared within this module with the LELLE Kit users. You will obtain information on which curricula were enriched by integrating the selected core skill-sets. [Examples of further tasks and activities, lesson plans applied in the pilot](#), [applied methods in coaching in Hungary](#) and [applied methods in coaching in Poland](#) are also described in this module of the LELLE Kit. Conclusions of profiling the students (based on cumulated data – not at the individual student level) and subsequent limitations on the application of the tool are summarised too.

Opinions of Stakeholders

To obtain further opinions on their applicability, the LELLE concept, tool and training materials were introduced to stakeholders (lecturers of universities outside the partnership, students interested in learning skills development, potential employers of graduating students, etc.) in regional dissemination events and workshops. You will have access to the summary report of the events including stakeholders' opinion on the necessity of learning skills development integration in curricula, suggestions and recommendations made in the regional conferences in [Hungary](#), [Poland](#), [Austria](#) and [the Netherlands](#).

Test results of the LELLE Kit demo

The demo version of the LELLE Kit has been shared with university teachers (invited by the LELLE partners) at a Summer Camp located in Balatonalmádi, Hungary, where they had hands-on experience with some of the activities in real life settings: developing learning skills in simulated classes. The outcomes and contribution of the [Summer Camp activities](#) to the LELLE Kit are annexed here.

Official release of the LELLE Kit

The LELLE Kit has been introduced in an [international conference](#). The outcomes, presentations, simulated classes, as well as the feedback received from the participants are presented in this section.
